This review actually applies to the whole "to win" series.

By B.B.

I am a huge fan of Mr. Smith's writing. I truly appreciate his mind, humor, and the wealth of experience he's amassed. A "must read" for racers, fans, or anyone with even a passing interest in cars as his writing style is fun as well as educational.

Perfect if you really want to know the details behind it..

By A. Magalhaes

In college times the only copy of this book in the library passed a long time in my hands.

It was a pleasure, in this digital age where a lot of application make the calculations and design suggestions, to find again the true north and all the forgotten details that truly matter.

How to build fast race cars that do not break. If that's your target, this is your book.

Not just about racing but about making as well.

By Chazza

Easily one of the best books I have read, not just about racing - which I don't do - but using the best

techniques in metal fabrication.

This book is a comprehensive manual, which includes everything you need to know from metallurgy, to fasteners, to machining, to setting up a racing car - buy it!
