About the Author

Erian A. Baskharone, Ph.D., is a Professor Emeritus of Mechanical and Aerospace Engineering at Texas A&M University, and a member of the Rotordynamics/Turbomachinery Laboratory Faculty. He is a member of the ASME Turbomachinery Executive Committee. After receiving his Ph.D. degree from the University of Cincinnati, Dr. Baskharone became a Senior Engineer with Allied-Signal Corporation (currently Honeywell Aerospace Corporation), responsible for the aerodynamic design of various turbofan and turboprop engines. His research covered a wide spectrum of turbomachinery topics, including unsteady stator/rotor flow interaction, and the fluid-induced vibration problem in the Space Shuttle Main Engine. Dr. Baskharone's perturbation approach to the problem of turbomachinery fluid-induced vibration was a significant breakthrough. He is the recipient of the General Dynamics Award of Excellence in Engineering Teaching (1991) and the Amoco Foundation Award for Distinguished Teaching (1992).

A practical, illustrated guide to thermal science

A practical, illustrated guide to thermal science Written by a subject-matter expert with many years of academic and industrial experience, Thermal Science provides detailed yet concise coverage of thermodynamics, fluid mechanics, and heat transfer. The laws of thermodynamics are discussed with emphasis on their real-world applications.

This comprehensive resource clearly presents the flow-governing equations of fluid mechanics, including those of mass, linear momentum, and energy conservation. Flow behavior through turbomachinery components is also addressed. The three modes of heat transfer--conduction, convection, and radiation--are described along with practical applications of each.

Thermal Science covers:

- Properties of pure substances and ideal gases
- First and second laws of thermodynamics
- Energy conversion by cycles
- Power-absorbing cycles
- Gas power cycles
- Flow-governing equations
- External and internal flow structures
- Rotating machinery fluid mechanics
- Variable-geometry turbomachinery stages
- Prandtl-Meyer flow
- Internal flow, friction, and pressure drop
- Fanno flow process for a viscous flow field
- Rayleigh flow
- Heat conduction and convection
- Heat exchangers
- Transfer by radiation
